Profile

Final-year Computer Science student (Intelligent Systems / AI) at BINUS University with a 3.78 GPA, completing a 12-month enterprise internship at PT SMART Tbk across Blockchain, Business Intelligence, and Generative AI teams. Builds end-to-end: machine learning models, ETL pipelines, BI dashboards, LLM-powered automation, and web applications. 1st Place in a national NLP competition (109 teams) and co-author of a research paper accepted at ICDEES 2026. Core stack: Python, SQL, TypeScript/React, PyTorch, LangChain, DOMO, Power BI, n8n, AWS, Azure.

Professional Experience

PT Sinar Mas Agro Resources and Technology (SMART Tbk)
February 2026 - Present

IT Digital Intern, Digital Transformation | IT Digital Division | Jakarta, Indonesia

Selected through the BINUS Enrichment Track for a competitive 12-month full-time engineering internship; rotated across three product teams delivering AI, Data, and Web solutions for Upstream and Downstream operations, Finance, HR, Procurement, and IT.

Generative AI (GenAI) Engineer *September 2026 - Present*

- Develop projects requested by business users, either built from scratch or continuing an existing system, running requirement-gathering and iteration cycles directly with them to keep outputs aligned with operational needs.
- Use GPT models as the main LLM behind product features, applying prompt engineering to shape model behavior and outputs.
- Built an interactive game for a company booth featuring AI computer vision and image generation with GPT, with prompt engineering applied throughout.

Business Intelligence (BI) Engineer *July 2026 - August 2026*

- Rebuilt a 6-year historical reporting process into a repeatable pipeline, reducing a recurring annual effort of 1 to 2 months to a single data refresh.
- Built the ETL pipeline in DOMO and cleaned multi-year data, ensuring consistent, audit-ready figures across all six years.
- Defined reporting requirements with business teams, turning a manual recurring burden into a reusable, low-maintenance asset.

Blockchain Developer *February 2026 - June 2026*

- Worked on **SmartTrace**, the company's blockchain-based traceability platform that traces processed palm products back to source (mill, estate, and harvest shipment records) across the supply chain.
- Led end-to-end development of an AI-assisted Supply Chain Recommendation System on that traceability data (SAP to PostgreSQL) to support route-selection decisions, owning recommendation logic, business rules, and system architecture from concept to implementation.
- Engineered a collaborative-filtering model trained on 1 year of supply chain transaction history, reducing manual Supply Chain Manager decisions by 80% in pilot testing.
- Gathered requirements through recurring user discussions and iterated model logic weekly from structured feedback, validating accuracy, usability, and business alignment through testing with business and technical teams.

Freelance Developer & Data Consultant
June 2026 - Present

Full-Stack Development, Automation & Data Projects | Jakarta, Indonesia (Remote)

- **Full-Stack Web Development:** Designed, built, and deployed web applications end-to-end for clients (requirements, interface design, REST APIs, and database structure) using React, TypeScript, and SQL databases.
- **AI & Workflow Automation:** Built n8n and Microsoft Power Automate workflows that connect business tools and eliminate repetitive manual work, including projects applying Generative AI and LLMs to real business use cases.
- **Financial Data & Reporting:** Established a structured process to record and consolidate a client company's financial data into a single consistent source, replacing scattered manual records, then prepared it into management dashboards.
- **Client-facing initiative:** Proposed and built a web reporting portal with automatically refreshing data, giving the client's customers a self-service, always up-to-date view and removing the routine of manually requesting updated figures.

Technology Project Member Mentor, Bina Nusantara Computer Club
November 2024 - February 2025

- Led a 7-member team through end-to-end delivery of a full-stack web application, achieving a 100% project completion rate.
- Implemented Agile Scrum (sprints, stand-ups, retrospectives) and mentored the team hands-on in modern front-end and back-end practices.

Key Projects

Indonesian NLP Regression Model | 1st Place, DATAQUEST AIRNOLOGY 4.0
2025

- Designed a hybrid feature extraction pipeline (word n-gram TF-IDF, character n-gram TF-IDF, and CountVectorizer fused into one feature vector) to predict incarceration duration from noisy Indonesian court transcripts, self-teaching the approach in two weeks with no prior NLP experience.
- Cleaned 16,572 training documents and benchmarked XGBoost, CatBoost, LightGBM, TabNet, and LSTM. The best model (XGBoost) reached 13.53 RMSE versus 22.15 with IndoBERT features (about 39% lower error), using significantly less compute.
- Owned team communication and technical presentation across two rounds to place 1st nationally out of 109 teams.

Tech stack: Python, Scikit-learn, XGBoost, Pandas, NumPy

Multi-Modal PCB Defect Detection | Top 28 of 210+ Teams, DATATHON 2025 2025

- Served as Computer Vision specialist on a multi-modal deep learning model classifying manufacturing defects on printed circuit boards, at the national datathon by RISTEK FASILKOM Universitas Indonesia.

Tech stack: Python, PyTorch, Computer Vision

EcoRank: Gamified Green Commuting | Solo Project, In Progress 2026

- Developing solo a gamified PWA that turns walking, running, cycling, and transit trips into a social competition with weekly leagues (Bronze to Diamond, with promotion and relegation), Eco-Guilds, and Squad War.
- Designing a points engine with per-mode rates, daily caps, and speed ceilings, backed by server-side GPS and motion validation that keeps anomalies off the leaderboard.
- Building FlexCard Studio (one-tap 9:16 story cards) and a separate Eco Impact currency; currently in the Phase 0 pilot build.

Tech stack: Next.js, TypeScript, Tailwind CSS, PWA, Supabase (Postgres, Auth, RLS), Edge Functions, Vitest, ESLint, Commitlint

Education

Bachelor of Computer Science, BINUS University September 2023 - Expected 2027

Specialization in Intelligent Systems | Jakarta, Indonesia | ***GPA: 3.78 / 4.00*** *(through semester 6) | On track to graduate in 3.5 years*

- Focus on artificial intelligence (machine learning, deep learning, NLP, and computer vision) on top of a strong software engineering foundation.
- Co-authored the research paper *"Parameter-Efficient Adaptation under Weak-Label Noise for Aspect-Based Sentiment Analysis of Indonesian E-Commerce Reviews"*, submitted and accepted at ICDEES 2026, as a graduation requirement alongside the full-time internship. Developed with a team of 3 authors and 1 faculty supervisor.
- **Contributions:** analyzed the experimental results and their statistical significance, contributed to manual data annotation, wrote the literature review, methodology, and results analysis, and handled paper review and editing.

Honors & Awards

- **1st Place (National), DATAQUEST AIRNOLOGY 4.0 NLP Competition**, Universitas Airlangga (2025), out of 109 teams
- **Top 28 of 210+ Teams, DATATHON 2025**, RISTEK FASILKOM Universitas Indonesia
- Finalist, BASIC: Business and System Innovation Challenge (UI/UX)
- Selected Participant: Samsung Innovation Campus Batch 7 (2025); Arkavidia Datavidia 2025; IT Fest Hackathon; Innovative UI/UX Design Competition

Technical Skills

- **Programming Languages:** Python, SQL, TypeScript, JavaScript, Java, PHP, C, C++, Swift
- **AI & Machine Learning:** Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Speech Recognition, Generative AI, Large Language Models, Prompt Engineering, Recommendation Systems, Collaborative Filtering, PyTorch, Scikit-learn, XGBoost, CatBoost, LightGBM, Pandas, NumPy
- **Data & Business Intelligence:** PostgreSQL, MySQL, ETL Pipelines, Data Modeling, Data Cleaning, Exploratory Data Analysis, Data Visualization, DOMO, Power BI, Tableau, Excel
- **AI Automation:** LangChain, OpenAI API, Google Gemini, n8n, Microsoft Power Automate
- **Web & Mobile Development:** ReactJS, Next.js, React Native, Express.js, Node.js, Laravel, Tailwind CSS, Supabase, REST APIs
- **Cloud & DevOps:** Amazon Web Services (AWS), Microsoft Azure, Azure Machine Learning, Docker, Git, GitHub, Blockchain Traceability
- **Enterprise & Collaboration:** SAP MM, Jira, Confluence, Asana, AppSheet, Figma, Agile Scrum
- **Soft Skills:** Communication, Leadership, Team Collaboration, Problem Solving, Critical Thinking, Adaptability, Time Management, Public Speaking
- **Languages:** Bahasa Indonesia (Native), English (Professional Working Proficiency)

Leadership & Community

Founder & Community Leader, Mari Kita Longrun Running Community May 2025 - Present

- Grew a running community to 900+ members in 5 months by running weekly member listening sessions and designing activities directly from that feedback.
- Executed a data-driven marketing strategy across Instagram and TikTok generating 170,000+ monthly profile views, and implemented a retention strategy and financial tracking system for long-term sustainability.

Student Leadership, Bina Nusantara Computer Club & BINUS University October 2023 - October 2025

- **HR Development Staff and Activist, Bina Nusantara Computer Club:** Managed the member development life cycle for 60+ members, running 5 technical and soft-skill programs (incl. AI Training, Figma) with 90%+ satisfaction, and pioneered 2 cross-university benchmarking programs backed by a data-driven feedback mechanism.
- **Freshmen Leader & Partner, BINUS University:** Mentored 60 new students within a 6-leader team, provided year-long academic mentorship to 10 students, and guided a mentee team through a community-based humanitarian project from start to finish.

Certifications

- **Microsoft (Coursera):** Artificial Intelligence on Microsoft Azure; Azure Machine Learning
- **IBM (Coursera):** Python for Data Science, AI & Development; Machine Learning with Python
- **Other:** Deep Learning with PyTorch: Image Segmentation (Coursera); iOS Developer Professional Certificate (Meta); Python Programming (Samsung Innovation Campus Batch 7); C Programming (BNCC Learning & Training)
